Level 1- Spring Semester
Course: COMP 102
Date: April 9, 2022
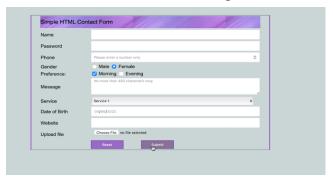

# Sheet 7

**Objective:** upon successful completion of this sheet, the students should be able to design forms and use the internal and external style sheets.

1. Design the following form using appropriate form controls.

2. Use appropriate CSS properties in either **the internal or external style sheets** to change the appearance of the form controls to look like the following.

**Note that:**

- The mouse cursor is changed when pointing over the submit and reset buttons to be displayed as a pointer. You should use the CSS "`cursor`" property with the "`pointer`" value.

- Both buttons have a colored border and a colored background, and the background color will be changed when hovering over them.

- The form header contains a decorative image as a background. You can specify the path of the image using _url (the path to the image)_ with the CSS "`background-image`" property (i.e., `background-image: url ()`).

- The position of the form controls and the form itself can be adjusted using the CSS "`margin`" and "`padding`" properties.

**Hint:** The used color codes are:

- `#9969C7` for the right and left borders of the form.
- `#552586, #9969C7,` and `#897098` for the border and two backgrounds of the buttons, respectively.
- `#C7D3D4EF` for the background of the entire page.
